

VISTA® enhances your design space

# Quick and easy installation

VISTA® is professionally installed with no mess, no hassle - and minimal or no disruption to activities at your home or business. With VISTA®, you can be assured of a comfortable beautiful, and more secure environment in which to live or work. VISTA® Window Film comes with a lifetime manufacturer's warranty. To enjoy the benefits of VISTA® in your home or business, give us a call today.

## Most homeowners fail to realize:

- Windows play a vital role in the home's energy efficiency allowing solar heat to enter in the summer months and home heat to escape in the cold months.
- Windows typically account for 15 to 30% of the total heating load and may account for more than 50% during the summertime cooling load.
- The most cost effective way to cut home energy loss is to upgrade existing windows with the installation of VISTA® Solar Control Window Film.

The challenge of reducing energy consumption is on every homeowner's mind as rising energy costs and power shortages make news every day. Designers and homeowners alike need to determine primary areas of wasted energy.

get the right perspective

on energy savings

# Be energy wise

The energy savings characteristics of a particular film are defined by the terms of “emissivity” and “solar heat gain coefficient.” The lower the emissivity of a window, the better the insulating value of the window. This reduces heat loss in the winter and heat gain in the summer. Solar heat gain coefficient is fraction of energy that strikes a window that is allowed entrance through that glazing system. Approximately 50% of a home’s utility bills are wasted by loss of heat and heat gain through untreated glass. A VISTA® installation will provide your clients with ongoing savings and lasting protection.

Some films even qualify for a tax credit or an energy cost rebate. Check with your local officials or a professional VISTA® Window Film dealer.

Trust not in what you see, but in what you don't.

# Enjoy the view

VISTA® Window Films address the full spectrum of ultraviolet ray protection but clients don't even know it's there, because VISTA® is virtually invisible and working hard to:

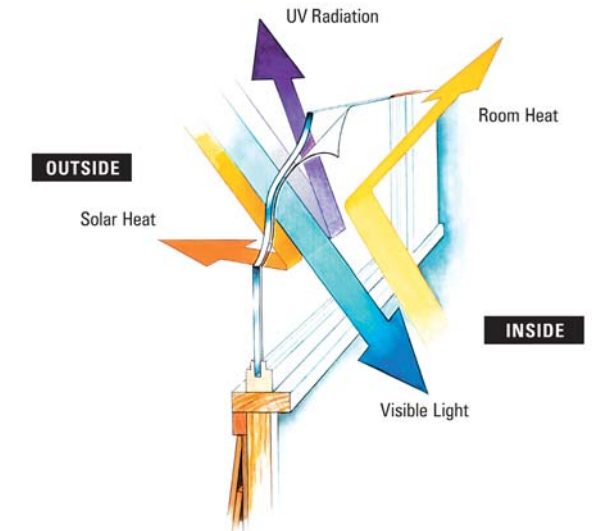

- save energy by lowering heating and cooling bills
- cut sun glare, reduce eye strain, and increase space utilization
- even heat distribution by eliminating hot spots and cold spots
- reduce fading by helping protect fabrics, furniture, flooring, and artwork from sun damage
- protect skin by blocking dangerous UVA and UVB rays to aid in skin cancer/photo-aging prevention (VISTA® UVShield® is the window film recommended by the Skin Cancer Foundation).
- form a safety shield to help keep broken glass in place and deter break-ins.

# Preserve and protect

VISTA® Window Film will help preserve the color brilliance of furnishings, fabrics, and carpets as well as help to protect fine woods, antiques and works of art from discoloration and fading.

VISTA® UVShield® blocks 99.9% of all ultraviolet rays, which is the highest degree of protection available, helping homeowners to feel confident that their newly designed home is protected against premature fading. The properties provide added ultraviolet protection for every member of the family. For this reason, VISTA® is recommended by the Skin Cancer Foundation as a device for the protection of the skin.

VISTA® Window Film allows glare controlled sunlight to pass through your windows while screening out heat and dangerous ultraviolet rays.
